## TEST REPORT FOR DASSOXTR

Report No.: J6810.04-121-24-R0

Date: 08/21/19

### REPORT ISSUED TO

#### DassoXTR

6060 Boat Rock Boulevard SW

Atlanta, Georgia 30336

### SECTION 1

#### SCOPE

Intertek Building & Construction (B&C) was contracted by DassoXTR, 6060 Boat Rock Boulevard SW Atlanta, Georgia 30336 to evaluate the performance of EPC-DK20-G2-PP Epic Cognac 1 x 6 fused exterior Bamboo deck boards when exposed to direct flames. Testing was conducted at the Intertek B&C test facility in York, Pennsylvania. Results obtained are tested values and were secured by using the designated test method(s). A summary of test results and the complete graphical test data is reported herein.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory.

### SECTION 2

#### SUMMARY OF TEST RESULTS

**Product Type:** Exterior Decking

**Series/Model:** EPC-DK20-G2-PP Epic Cognac 1 x 6 fused exterior Bamboo deck boards

#### SFM 12-7A-4 Test Results

The assembly described and tested in this report **did** meet the Conditions of Acceptance of SFM 12-7A-4A. Construction of the full assembly is summarized in Section 7 of this test report.

For INTERTEK B&C:

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample(s) tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

## TEST REPORT FOR DASSOXTR

Report No.: J6810.04-121-24-R0

Date: 08/21/19

### SECTION 3

#### TEST METHOD

The assembly was evaluated in accordance with the following:

**California Referenced Standards Code (Chapter 12-7A), *Materials and Construction Methods for Exterior Wildfire Exposure***

**SFM Standard 12-7A-4A, *Decking***

### SECTION 4

#### MATERIAL SOURCE/INSTALLATION

The sampled products were selected by Intertek B&C personnel. The specimen(s) was/were witnessed during production and tagged prior to shipment on 06/11/19, (Reference Intertek B&C Test Specimen Selection Report No. J6810.03-103-15-r0, dated 06/11/19). The remaining components of the test assembly were provided by the client except simulated floor joists which were acquired and assembled by Intertek B&C personnel.

### SECTION 5

#### LIST OF OFFICIAL OBSERVERS

NAME	COMPANY
Scott Gingrich	Intertek B&C
Nathan Brillhart	Intertek B&C
Mark Dluzeski	Intertek B&C

## TEST REPORT FOR DASSOXTR

Report No.: J6810.04-121-24-R0

Date: 08/21/19

### SECTION 6

#### TEST PROCEDURE

##### Part A – Under-deck Flame Test

For the under-deck flame test, the ignition source for the under-deck test is a gas burner with a 12 inch by 12 inch diffusion adapter filled with a minimum 4-inch layer of Ottawa sand. The top surface of the burner through which the gas is applied is centered and positioned 27 inches below the surface of the deck. The gas supply to the burner is C.P. grade propane (99 percent purity). A burner verification test is run prior to the under-deck test. Verification test involves using oxygen consumption calorimeter to confirm the output. The burner is set to produce a gross heat output of  $80 \pm 4$  kW for three minutes. The gas burners are controlled with mass flow meters to control the volume of gas to match the heat outputs of the standard. After the verification test, the specimen is installed into the fixture and the diffusion burner is placed. The collection hood exhaust duct blower is turned on and an initial flow is established. Burner is centered underneath the test deck and then ignited at a fuel flow rate that is known to produce 80 kW of heat output and maintained for 3 minutes. When the burner is shut off, post-test observations are documented for 40 minutes.

### SECTION 7

#### TEST ASSEMBLY DESCRIPTION

The overall dimensions of the test assembly are 4 feet wide by 84 inches high. Below is a detailed description of the components in the assembly:

##### Framing

2 x 6 Douglas fir dimensional lumber was cut to 27-1/8 in. Two identical pieces were cut to simulate two joists for the deck boards to attached to.

##### Decking

DassoXTR, EPC-DK20-G2-PP Epic Cognac 1 x 6 fused exterior bamboo deck boards were cut to 24 in. long lengths. The deck boards were secured to the joists using Cisen winged deck fasteners system. This system used a #7 x 1-3/5 in. grade 304 stainless steel screws and wing clips to secure the deck boards to the wood joists. The deck fastener system created a 5/16 in. space between each deck board.

Report No.: J6810.04-121-24-R0

Date: 08/21/19

### SECTION 8

#### TEST OBSERVATIONS

Test Date: 06-27-2019

Lab Temperature: 84°F

Lab Relative Humidity: 43%

##### Under-deck Test #1

TIME (Min:Sec)	OBSERVATIONS
00:00	Ignition of burner. Heat output set at 80 kW
00:48	Ignition of the underdeck.
01:04	Ignition of the deck surface.
03:00	Burner extinguished.
04:16	Flaming on the deck surfaces stop emitting from the surfaces.
43:00	End of test and observations.

##### Under-deck Test #2

TIME (Min:Sec)	OBSERVATIONS
00:00	Ignition of burner. Heat output set at 80 kW
01:04	Ignition of the underdeck.
01:46	Ignition of the deck surface.
03:00	Burner extinguished.
04:15	Flaming on the deck surfaces stop emitting from the surfaces.
43:00	End of test and observations.

##### Under-deck Test #3

TIME (Min:Sec)	OBSERVATIONS
00:00	Ignition of burner. Heat output set at 80 kW
00:58	Ignition of the underdeck.
01:07	Ignition of the deck surface.
03:00	Burner extinguished.
04:18	Flaming on the deck surfaces stop emitting from the surfaces.
43:00	End of test and observations.
